PROFESSIONAL SUMMARY

Data Management Professional with hands-on experience building high-volume ETL pipelines, interconnected SQL data models, and KPI dashboards across financial and enterprise datasets. Proficient in Python, SQL, and statistical methods including regression, classification, and anomaly detection; experienced in data quality validation, cohort analysis, A/B testing, and n8n automation pipelines. Passionate about financial and economic data with a drive to deliver fit-for-purpose data products that enable well-informed business decisions.

TECHNICAL SKILLS

Languages: Python, SQL, R, JavaScript **Data & BI:** Power BI, Excel, Streamlit, Git, Docker, n8n, Google Sheets
Databases/Cloud: PostgreSQL, MySQL, Supabase, BigQuery, Snowflake, AWS, GCP **ML & Analytics:** Scikit-learn, TensorFlow, PyTorch, Regression, Classification, Anomaly Detection
Practices: ETL/ELT Pipelines, Data Modeling, Data Quality Validation, Cohort Analysis, A/B Testing, Hypothesis Testing

EXPERIENCE

AI and Automation Analyst · Sankore InvestmentsApr 2025 – Present | Lagos, Nigeria

- Built and maintained full n8n automation pipelines that ingest PDF executive summaries and CSV portfolio reports from Google Drive daily, parsing financial data and upserting into Supabase PostgreSQL (daily_asset_reports, daily_performance_reports tables) — eliminating manual data entry entirely.
- Engineered a Next.js + Supabase asset-reports dashboard with currency-split KPI cards (USD/NGN AUM, daily G/L), multi-product trend charts, paginated historical breakdowns, and a Slack notification system posting formatted daily returns to #asset-reports on completion.
- Designed and governed KPI definitions, SQL views, and upsert logic across interconnected data models; resolved complex data quality issues including parameterized query errors, CSV comma-in-number parsing, and slug-based product matching using REGEXP_REPLACE in PostgreSQL.

Data Science Intern · WayalinksApr 2025 – May 2025 | Lagos, Nigeria

- Designed end-to-end data pipelines transforming raw interaction logs into analytics-ready datasets, ensuring high data quality and reliability across 12 KPI dashboards used by product and operations teams.
- Applied cohort analysis and behavioral segmentation on 15,432 user records using Python and SQL to surface customer insights that informed data product strategy and feature prioritization.
- Designed A/B testing and hypothesis-driven experimentation frameworks; automated Power BI reporting pipelines, improving internal prediction accuracy by 17% and cutting reporting turnaround by 22%.

Research Assistant · NITHUBMay 2025 – Sep 2025 | Lagos, Nigeria

- Engineered scalable Python ETL pipelines normalizing and validating 4,000+ product records, improving dataset integrity and downstream analytical structure to support data-driven decisions.
- Applied statistical methods — regression, variance, and trend analysis — on research datasets; delivered executive dashboards improving insight visibility by 30% and accelerating decision cycles.

Data Analyst · Great Place to WorkSep 2024 – Dec 2024 | Lagos, Nigeria

- Defined and tracked 12 cross-functional KPIs across 5 departments via interconnected SQL views and dashboards; improved reporting efficiency by 30% and collaborated with cross-departmental partners.
- Transformed 5,000+ structured and survey records into analytics products; conducted funnel and correlation analysis identifying 4 key retention drivers, adopted across 5 management teams.

KEY PROJECTS

Point-Supervised Remote Sensing Segmentation | Python, PyTorch, HuggingFace, Rasterio

- Implemented a custom Partial Cross-Entropy (pfCE) loss function with focal weighting to train semantic segmentation models using only sparse point-level annotations, reducing annotation cost by up to 20× vs. full pixel-level labelling.
- Integrated the loss into DeepLabV3+ (ResNet-50), SegFormer-B2, and U-Net across 2,400 aerial image patches; SegFormer-B2 achieved 72.59% mIoU at just 5% label density — within 0.1pp of full supervision.

RAG & AI Agentic Pipeline | Python, LangChain, Vector DB

- Built a production-ready Retrieval-Augmented Generation pipeline with structured data ingestion and multi-step reasoning, improving data retrieval and matching efficiency by 60%.

EDUCATION

M.Sc. Financial Engineering · WorldQuant UniversityExpected Dec 2027

B.Sc. Mathematics (STEM) · University of LagosDec 2025
